At Zolvo, our technical core is a real-time reconciliation engine that automatically crosses invoices with messy bank transfers from multiple communication channels (PDFs, emails, banking APIs, LMS). An institutional client connects us with his bank account and uploads a JSON with 500 invoices issued this month. The problem is that buyers pay incomplete amounts, make a reference mistake or consolidate three invoices in a single bank transfer.

The technical challenge I pose to you is to demonstrate how you would use AI technology to automate 80% of the sales and marketing process, ensuring a clear return on investment (ROI) for the customer.

Context y Challenges

Zolvo has developed an "AI Sales & Growth Engine" that automates outbound marketing and initial sales closing. The system can identify leads, send personalized messages via LinkedIn/Email, and book meetings without human intervention.

However, to scale across LATAM, we face three critical challenges:

- **Growth Marketing:** How do we generate qualified demand virally and organically so that Zolvo becomes the #1 choice in the startup ecosystem? *Water Bird*
- **Finance & Sales:** How do we structure a pricing and sales model that maximizes LTV (Life Time Value) and reduces churn?
- **Automation:** How do we connect the data pipeline (n8n, Supabase, LLMs) so that the agents' responses are indistinguishable from a human and fully scalable?

Submission Instructions

You must submit a strategic and technical proposal to launch Zolvo in a new market (e.g., Brazil or Mexico). The proposal must demonstrate how you would use AI technology to automate 80% of the sales and marketing process, ensuring a clear return on investment (ROI) for the client, will be evaluated:

- **Business Fellowship:** Introduce your viral growth marketing strategy and a Sales/Finance model. A sales roadmap with LTV/CAC projections and a Growth Marketing plan using AI & Automation
- **Coding Fellowship:** Shows Architecture and Automation. You must present a functional flow (using tools like n8n or Cursor AI) that connects leads with AI agents in a way that is indistinguishable from a human.

Video instructions

Record a 5-minute demo, make sure that your face and voice are visible and audible

Video content

Explain your growth strategy, sales model, and how automation supports the entire system

Uploading

Upload your video to Google Drive before the deadline
